

# Imprivata – the single sign-on solution for the healthcare sector

Access patient data swiftly and securely with Imprivata

A white outline overlay of a user login form on a blurred background of a person's hands typing on a laptop. The form includes a camera icon at the top, a 'Username' field with a person icon, a password field with a lock icon and masked characters, a 'Remember me' checkbox, a 'Forgot Password?' link, and 'LOGIN' and 'REGISTER' buttons.

# Secure, time-saving, flexible and intuitive

Doctors, nurses and healthcare support workers all use the same workstations to access patient data. Logging in to and out of workstations is very time-consuming, and group accounts have become obsolete with today's strict data protection requirements.

Now Imprivata has just the solution. It combines the benefits of reduced logging-in time, high data security, the option to define workflows and an extremely straightforward technical implementation process. No other solution on the market offers this combination so you will be right at the cutting edge!

Imprivata helps you save up to 45 minutes per shift and member of staff.

## Benefits

### Secure access:

- By eliminating group accounts, you increase patient data security and guarantee 100% individual transparency.
- Using complex passwords increases the security of your organization.
- Users no longer need to remember or enter complex passwords.
- Two-factor authentication provides even more security.

### Time-saver:

- You can save up to 45 minutes per shift and member of staff, which means more time for your patients.
- Staff are happier because they can log in faster and switch users more rapidly on workstations and in

## Imprivata and x-tention

x-tention is Imprivata's only implementation partner in Austria, and the two companies have a partnership that goes back many years. Imprivata OneSign® software solutions combine with healthcare IT provider x-tention's deep-rooted knowledge of the sector to create a unique product.

applications.

### Workflow definitions:

- The software automatically launches personalized workflows when a user logs in.
- These can be triggered by individual events (e.g. executing a policy or starting a script) based on the difference between the various workstations and/or members of staff.
- Works with Confirm ID.

### Simple technical implementation:

- Simple central integration using virtual appliances.
- Active Directory read only; no AD schema enhancement.
- Easy to use.

**Already 1,900 successful installations worldwide.**

## Modules and functions

### • Kiosk mode

Group logins to workstations are no longer secure nor up to date. Kiosk mode enables personalized logins, allowing you to switch users very quickly while retaining personalized transparency in the various applications.

### • Application and workflow auto-launching

Applications and workflows relevant to a user and their location can be launched or closed automatically when the user logs in. Implementing scripts allows maximum flexibility.

### • Authentication management

Authentication management (AM) simplifies and secures access to physical and virtual desktops. When users are authenticated with an ID card or fingerprint, the software automatically enters their username and password on the login screen. We strongly recommend two-factor authentication, which provides additional protection if an ID card is lost.

### • Single sign-on

Single sign-on (SSO) makes it easier to log in to and out of applications as usernames and passwords of previously authenticated users are entered automatically.

### • Virtual desktop access

Together with various developers (Citrix, VM-ware, etc.), virtual desktop access (VDA) allows access to virtual desktops using No Click Access™. Access management for desktops has been simplified to such an extent that members of staff only need to scan their ID card or fingerprint to access their personal desktops and applications securely from wherever they are.

### • Self-service password management

Self-service password management (SSPW) gives members of staff a swift, simple and secure way to reset passwords themselves without needing to contact the helpdesk.

### • Confirm ID

Confirm ID greatly simplifies the necessary approval processes, for example when findings or medication need to be verified. This function needs to be supported in the relevant applications for it to work.

### • Fingerprint scanners with live-finger detection

Fingerprint scanners with live-finger detection are technical authentication devices that users use as part of their Imprivata OneSign® solution to gain No Click Access™ to their desktops and applications. Staff of medical institutions can easily access desktops and applications with a simple tap of the finger, rather than having to enter a username and password.

### • OneSign Anywhere

OneSign Anywhere provides secure single sign-on authentication no matter where you are. All you need is a connection to the OneSign Anywhere appliance via the internet.

## Technical implementation

Implementing Imprivata in existing systems is very straightforward. You can implement it centrally using virtual appliances. You only have read access to the Active Directory, and no AD schema enhancement is necessary. We install the software in a workshop context, so once the implementation is complete your internal IT department will be able to perform simple administrative tasks independently, including creating an application profile.

Imprivata is the perfect solution for your healthcare institution. We look forward to showing you the benefits of Imprivata personally!
