

SecurITe Launches agentis360 at DMEA in Berlin and Closes Double-Digit Million Euro Seed Round

London / Santa Clara / Wels, 27 May 2026 – SecurITe Group Ltd., a cybersecurity company purpose-built for healthcare and critical infrastructure, announces the commercial launch of agentis360, the first agentic-native AI security platform purpose-built for healthcare and critical infrastructure environments. The product launch took place at **DMEA 2026** in Berlin, Europe's leading digital health congress.

Simultaneously, SecurITe announced the successful closing of a **double-digit million-euro seed investment round**. The financing was deliberately structured with an independent European financial partner to preserve strategic flexibility for the company's next phase of ambitious development and international growth.

Healthcare Cybersecurity at a Critical Inflection Point

Traditional cybersecurity solutions are increasingly ineffective against attacks enhanced or fully executed by AI. Autonomous agents can accelerate zero-day discovery, exploitation, generate adaptive malware, and execute goal-oriented data exfiltration campaigns at a scale and speed traditional security tools cannot counter. Agentic AI systems may also perform actions they were never intended to take in pursuit of their assigned objectives. The first AI driven attacks are already underway.

Therefore, the security paradigm must shift. Defending critical infrastructure, especially healthcare as the most targeted critical infrastructure sector, requires security systems that are themselves highly intelligent, autonomous and contextual.

agentis360: Security Designed for an Agentic World

agentis360 redefines cybersecurity through coordinated AI agents that natively understand the language, protocols, and workflows of their environments. Unlike legacy platforms that retrofit AI onto conventional architectures, agentis360 was engineered from the ground up for an agentic world – where security decisions are made at machine speed, within full clinical context, and with complete transparency for the teams responsible for patient safety.

The platform closes critical security gaps across clinical networks, detects sophisticated attacks targeting healthcare-specific protocols, identifies anomalous device behavior, enhances resilience across interconnected medical ecosystems, and delivers proactive, intelligent threat response. Built with a global vision and a distinct focus on digital sovereignty where it is mandatory, agentis360 is not AI applied to security – it is security designed for an agentic world.

Built by Veterans. Backed by Strategic Depth.

SecurITe was founded in 2024 by cybersecurity veterans Manuel Nedbal and Sumanth Gangashanaiah, who bring decades of combined experience from Google, Netskope, Fortinet, ShieldX, McAfee, and Intel. The company was established in strategic partnership with x-tention, one of Europe's leading healthcare IT specialists, employing nearly 800 professionals across 16 locations and serving more than 1,000 healthcare customers. This partnership provides SecurITe with significant strategic access across the European healthcare market. Additional value lies in a cross-continental exchange of advanced technological expertise and market insight, rather than a one-sided brain drain: world class cybersecurity capability, initiated in Europe and built on Silicon Valley engineering depth.

Voices of the Founders and Partners

"Stopping our healthcare data from leaking demands more than another dashboard or AI layers on top of outdated architectures. We built agentis360 from the ground up for an agentic world – one where AI agents actively coordinate the defense of clinical systems in real time. This investment round gives us the fuel to bring this vision to hospitals and health systems and critical infrastructure providers across Europe, UK, the United States and beyond", said Manuel Nedbal, CEO and Co-Founder, SecurITe.

"x-tention has been building trusted relationships with healthcare providers for 25 years. Cybersecurity is no longer optional in healthcare – it is a fundamental operational requirement. With agentis360, we are bringing our customers a solution specifically designed for their environment, with the clinical context that generic platforms simply cannot provide. This is exactly what the market has been waiting for.", said Herbert Stöger, Managing Director, x-tention.

Strong Early Market Validation

SecurITe has demonstrated exceptional commercial momentum since inception. SecurITe Operations GmbH, the company's European entity, has already onboarded more than 30 enterprise customers across the healthcare and critical infrastructure sectors. A similar number of active Proof-of-Concept and Proof-of-Value engagements for agentis360 are currently underway, reflecting strong clinical validation and broad market demand. Technology development is led by SecurITe Technology Inc. in Santa Clara, California, supported by an advanced engineering hub in Bangalore, India.

Expansion Across Europe, United Kingdom, the United States, and Beyond

With the proceeds of the financing round, SecurITe will accelerate the commercial rollout of agentis360 across Europe, United Kingdom, the United States and beyond, deepen go-to-market partnerships in healthcare and critical infrastructure, and continue expanding its engineering capabilities. Strategic market entry in Europe and United Kingdom represent a key pillar of the company's growth strategy, followed by an early market entry in the United

States. Additional global expansion is planned for subsequent phases, with priority markets defined by the parallel advancement of healthcare digitization and cybersecurity regulation.

About SecurITe Group Ltd.

SecurITe Group Ltd. is a cybersecurity company headquartered in London and led by Tony Corkett as Director together with CEO Manuel Nedbal, purpose-built for healthcare and critical infrastructure. Founded in 2024 by cybersecurity veterans with experience at Google, Netskope, Fortinet, ShieldX, McAfee, and Intel, SecurITe's flagship platform agentis360 is the first agentic-native AI security platform designed for clinical environments and critical infrastructure. With European operations (SecurITe Operations GmbH), technology development in the USA and India (SecurITe Technology Inc., Santa Clara), and strategic partnerships with x-tention group and Anwert Technologies, SecurITe is positioned for global expansion.
